

**Zero Fire** can take care of all your fire protection needs.

ZEROFIRE.CO.NZ | 0800 ZEROFIRE

*Our experienced, dedicated team seamlessly delivers a complete, quality fire protection package from start to finish, giving you peace of mind for any type of building project.*

## Company Values

### **TRUST / POSITIVITY / KOTAHITANGA / QUALITY / ACCOUNTABILITY**

Our company values have been designed with the family aspect in mind. They are TRUST, POSITIVITY, KOTAHITANGA (strength in unity), QUALITY and ACCOUNTABILITY. We expect any new member to the Zero Fire team to be accepted, valued by all and maintain these values as we continue to grow personally and as a team.

## What we offer

Zero Fire provides a comprehensive range of services to fully meet your fire protection requirements for all types of buildings, from large-scale residential through to commercial.

*Protection of people and assets is at the heart of what we do.*

## Our Services

Zero Fire provide a comprehensive range of services to fulfil all of your fire protection requirements for all types of buildings.

- Consultation and Design
- Fire Sprinkler Systems
- Building Hydrant Systems
- Fire Alarm Systems
- Hand Held Fire Fighting Equipment
- Passive Fire Protection Systems
- Testing and Compliance
- Service & Maintenance

We can help with initial consultation through to the detailed design of fire sprinkler systems, fire alarm systems, building hydrant systems and more.

Today's buildings are complex and full of crucial services that are vital to both daily operations and emergency situations. By consulting with our experienced team at the preliminary stages of your project we can help identify any potential issues, provide budget pricing and cost saving measures, and allow early coordination of building services and architectural requirements. This all helps ensure a seamless transition from the preliminary stages through to final completion of your project.

Over recent years the New Zealand construction industry has seen a shift from the conventional two-dimensional designs to fully comprehensive three-dimensional building models. These provide substantial advantages in not only the coordination of building services but construction and maintenance of buildings.

Here at Zero Fire we use the latest software and technologies to generate both 2D and 3D designs using programmes such as AutoCAD, BIM360 and Revit, with our design team capable of providing Revit drawings to Level of Design - 500 (LOD 500).

Whether it's a new installation or maintenance of an existing system, our team can ensure your fire sprinkler system is up to the crucial task of protecting lives and assets.

With one of the largest project management and installation teams in the Central North Island, Zero Fire has a wealth of knowledge across all facets of the industry - whether it be new installations or maintenance of existing systems.

Our dedicated team is committed to providing this high-quality service on all our projects, from small service-based projects through to high-end apartment complexes or large industrial buildings.

We are proud of our workmanship and use only reputable products and materials for all of our installations. This coupled with our stringent quality assurance measures allows us to complete projects to the satisfaction of our clients every time.

# Building Hydrant Systems

We install building hydrants as part of a comprehensive fire protection system.

Installed in strategic points around the building, these hydrants provide a critical role for the fire service in the event of a fire, especially in large, multi-storey buildings.

Building hydrant systems are critical in construction environments and are preferably installed during the early stages of a project to ensure the safety and integrity of a building during the construction process.

Our team is highly experienced in providing design, installation and maintenance for all types of fire alarm systems.

With the complex nature of buildings today, the fire alarm is a key element in helping evacuate people from the building and for the fire service to assess, control and evacuate buildings during a fire.

The interaction between the fire alarm and other services is crucial. Activating fire and smoke curtains, releasing fire doors and shutting down of mechanical systems prevents the spread of smoke and fire, and provides people with sufficient time to evacuate the affected premises.

Our team at Zero Fire is highly experienced in providing design, installation and maintenance for all types of fire alarm systems, while our commitment to using experienced technicians and quality products with an emphasis on functionality sets us apart.

Over the years we have built strong relationships with fire engineers, suppliers and governing bodies within the industry, allowing us to harness the technical information required to deliver high quality, comprehensive and functional products and services for our customers.

# Handheld Firefighting Equipment

We supply high quality hand-held firefighting equipment such as fire extinguishers and hose reels as part of a comprehensive fire protection system.

Here at Zero Fire we supply high quality hand-held firefighting equipment such as fire extinguishers and hose reels as part of a comprehensive fire protection

system. When used in conjunction with your alarm and sprinkler systems, this equipment completes the full protection package.

We know our stuff when it comes to the installation of passive fire protection systems for commercial, industrial and public buildings.

Passive measures provide protection by their very existence and are largely unseen – however they are vital to the stability and integrity of a building structure when attacked by fire.

Passive fire protection systems work by separating the building into areas of manageable risk, restricting the spread of fire, and protecting structural elements from fire to prevent their early collapse.

This allows critical time for occupants to escape and provides a degree of protection for firefighters.

Zero Fire is proud to have NZQA level three and four accredited installers of fire stopping systems.

# Passive Fire Protection Systems

# Testing & Compliance

A Building Warrant of Fitness (BWF) is dependent on compliant system specified systems.

Here at Zero Fire, we can complete your BWF and look after your fire protection systems, regardless of whether we were the original installers or not.

We carry out routine testing for sprinkler systems, fire alarms, emergency lighting systems, all passive features, and building hydrant systems to ensure they are compliant and in full working order.

We also offer routine testing of fire extinguishers, hose reels, and fire blankets to ensure they are compliant, in full working order, and are ready to be used when required.

# Service & Maintenance

Here at Zero Fire the team are experienced in maintenance of all systems.

We can provide comprehensive service and maintenance of your system, whether it is required under testing and compliance, or due to renovations or extensions.

We understand the importance of prompt maintenance and are responsive to your maintenance needs while always operating with honesty and integrity.

We have Technicians on call 24/7, that can attend to defects, fire calls, or anything else required.

Zero Fire has over 25 years' experience in the design and installation of fire protection systems. The team fully understand how important an efficient, cost effective and compliant system is to provide protection of life and assets from the devastating effects of fire.

Innovation within the fire protection industry is forever changing with research and new technologies being released on a regular basis. Zero Fire's continuous improvement approach keeps it at the forefront of these changes and are market leaders in fire protection. Zero Fire is a member of the Fire Protection Association of New Zealand, accredited by Aon Fire Protection and utilise a certified ISO9001 - Quality Management System. Zero Fire was incorporated in 2015 by the managing director, Travis Pocock. The Zero Fire story started with Travis as the single employee and over the past ten years has grown to almost

fifty full time staff over five divisions and is continuing to grow at a steady rate.

Travis's vision for Zero Fire was not only to build a comprehensive and industry leading business but also to provide an innovative, professional, quality focused and enjoyable place for people to work. This is reflected in the experienced, diverse and energetic team at Zero Fire. Being a family owned and operated business allows decisions to be made decisively and actioned without delay. We believe that our clients appreciate this attribute, as any issues that arise are dealt with immediately.
